

Keeping Your Cat Happy Indoors

While many cats enjoy being outside where they can hunt prey and explore their surroundings, it's a myth that going outside is a requirement for feline happiness. Playing regularly with a cat easily satisfies her stalking instinct, keeps her stimulated, and provides the exercise she needs to stay healthy and happy. In fact, the indoor cat who gets lots of attention and playtime is likely happier than the indoor-outdoor cat who is generally ignored by her human companions.

Here are some tips for safely confining your cat and making the great indoors an interesting, feline-friendly environment that meets all of your cat's needs.

- Start young. Kittens who are kept indoors usually show no desire to venture outside when they grow up.
- Provide a screened porch or other safe way for your cat to experience the outdoors. Consider building or purchasing a "cat fence" or similar enclosure. Such an enclosure can allow your cat to experience all the pleasures of the great outdoors without the risks. However, a fence may not prevent animals from entering your yard, so you should always be present when you allow your cat outside. And be sure to cat-proof the yard by checking that the fence has no escape routes and by making toxic plants, garden chemicals, and other dangerous objects inaccessible.
- If you live in a peaceful neighborhood in which you can walk without encountering loose dogs, consider buying a harness and training your cat to walk on a leash. This training takes time and patience, for both you and the cat, and it's easiest when your cat is young. Some cats can even be trained to sit on your lap while you are on the deck or patio, or harnessed and tied to a stationary object to enjoy the outdoors while you are gardening nearby (but be sure to never leave your cat alone while she is tied to a stationary object).
- Install a perch near a sunny window; padded perches can be purchased at many pet supply stores or through catalog retailers. Another option is an enclosure that sits in a window frame (much like an air conditioning unit) and provides a secure space in which your kitty can "hang out." Larger options are available that attach to the side of a house or ground-floor apartment patio. It's best to allow your cat access to these when someone is home to supervise.
- Buy a ready-made cat tree (often called a "kitty condo"), or make your own. A cat tree may stretch from floor-to-ceiling or be shorter. It provides great climbing opportunities and, in multi-cat households, creates more play and rest areas by taking advantage of vertical space.

- Play with your cat each day. Try different types of toys that recreate "fishing," "chasing," and "flying" prey. And leave "toys" such as paper bags and cardboard boxes out when you are not home.
- Give your cat a feline friend—they can provide one another with companionship and entertainment.
- Plant cat grass (available from pet supply stores) in indoor pots so your feline can graze.
- Clean the litter box regularly.

Even cats who are protected from roaming free should still be outfitted with a collar and visible identification. The occasional open window (make sure your windows have secure screens) or door offers a tempting opportunity for your cat to explore the outdoors. And your cat may become frightened and make her way outside if strangers come to work on your house or if there is a fire or similar disaster. The collar and visible ID could help someone get your pet back to you. For extra insurance, consider having your cat microchipped. If you do lose your cat, contact your local animal shelter immediately to file a report. Shelter workers can give you tips on getting your pet back home safely. Also read our tips for finding a lost pet.

Introducing Your New Cat to the Litter Box

MOST OF US KNOW CATS are finicky eaters, but they can also be pretty picky when it comes to the other end of the digestive process—making use of a litter box. Fortunately, the following suggestions should keep your cat from “thinking outside the box.”

Location, Location, Location

Most people are inclined to place the litter box in an out-of-the-way spot to minimize odor and prevent cat litter from being tracked throughout the house. But if the litter box ends up in the basement—next to an appliance or on a cold cement floor—your cat may be less than pleased for a number of reasons.

A kitten or an older cat may not be able to get down a long flight of stairs in time to get to the litter box. If the litter box is located in an area that she seldom frequents, she may not even remember where it is, especially during the first few weeks she’s welcomed into your home. If a furnace, washing machine, or dryer suddenly comes on and startles your cat while she’s using the litter box, that may be the last time she risks such a frightening experience. And if your cat likes to scratch the surface surrounding her litter box (which some cats do), she may find a cold cement floor unappealing.

So you may have to compromise. The litter box should be kept in a spot that affords your cat some privacy yet is also conveniently located. If you place the litter box in a closet or a bathroom, be sure the door is wedged open from both sides to prevent her from being trapped inside or locked out. Depending on the location, you might consider cutting a hole in a closet door and adding a pet door.

Pick of the Litter

Research has shown that most cats prefer fine-grained litters, presumably because they have a softer feel. The new scoopable (clumping) litters usually have finer grains than the typical clay litter and are very popular. But high-quality, dust-free, clay litters are relatively small-grained and may be perfectly acceptable to your cat.

If you suspect your cat has spent part of his life outdoors and is likely to eliminate in your houseplants, try mixing some potting soil with your regular litter; pellet-type litters or those made from citrus peels are not recommended. Once you find a litter your cat likes, stick with it. Buying the least expensive litter or the brand that’s on sale any given week could result in your cat not using the litter box.

Many cats are put off by the odor of scented or deodorant litters. For the same reason, it’s not a good idea to place a room deodorizer or air freshener near the litter box. A thin layer of baking soda placed on the bottom of the box will help absorb odors without repelling your cat, and odors shouldn’t really be a problem if you keep the litter box clean. If you find the litter box odor offensive, your cat probably finds it even more offensive and won’t want to eliminate there.

continued on reverse side

What's the Magic Number?

You should have at least as many litter boxes as you have cats. That way, none of them will ever be prevented from eliminating in the litter box because it's already occupied. You might also consider placing litter boxes in several locations around the house, so that no one cat can prevent the other cats from getting access. We also recommend that you place at least one litter box on each level of your house.

It's not possible to designate a personal litter box for each cat in your household, as cats may use any litter box that's available, and that means a cat may occasionally refuse to use a litter box after another cat has used it. In this case, all of the litter boxes will need to be kept extremely clean and additional boxes may be needed.

An Undercover Operation? Potential Problems of Covered Litter Boxes

Some people prefer to provide their cats with a covered litter box, but doing so may introduce some problems.

You may forget to clean the litter box as frequently as you should because the dirty litter is "out of sight, out of mind." A covered litter box traps odors inside, so it will need to be cleaned more often than an open one. A dirty, covered litter box is to your cat what a portapotty is to you!

A covered litter box may not allow a large cat sufficient room to turn around, scratch, dig, or position herself in the way she wants.

A covered litter box may make it easier for another cat to lay in wait and ambush the user as she exits the box; on the other hand, a covered litter box may feel more private, and timid cats may prefer it.

To discover which type of litter box your cat prefers, you may want to experiment by offering both types at first.

Keeping It Clean

To meet the needs of the most discriminating cat, feces should be scooped out of the litter box daily. How often you actually change (replace) the litter depends on the number of cats you have, the number of litter boxes, and the type of litter you use. Twice a week is a general guideline for clay litter, but depending on the circumstances, you may

Related topics at www.petsforlife.org

- Solving Litter Box Problems

This information provided for you by

need to replace it every other day or only once a week. If you clean the litter box daily, scoopable litter may only need to be changed every two to three weeks. If you notice an odor or if much of the litter is wet or clumped, it's time for a change. Don't use strong smelling chemicals or cleaning products when washing the litter box, as doing so may cause your cat to avoid the box. Some cleaning products are toxic to cats. Washing with soap and water should be sufficient.

Liner Notes

Some cats don't mind having a plastic liner in the litter box, while others do. Again, you may want to experiment to see if your cat is bothered by a liner in the box. If you do use a liner, make sure it's anchored in place, so it can't easily catch your cat's claws or be pulled out of place.

Depth of Litter

Some people think that the more litter they put in the box, the less often they will have to clean it, but that's a mistake. Most cats won't use litter that's more than about two inches deep. In fact, some long-haired cats actually prefer less litter and a smooth, slick surface, such as the bottom of the litter box. The fact is the litter box needs to be cleaned on a regular basis, and adding extra litter is not a way around that chore.

"Litter-Training" Cats

There's really no such thing as "litter-training" a cat in the same way one would houstrain a dog. A cat doesn't need to be taught what to do with a litter box because instinct will generally take over. The only thing you need to do is provide an acceptable, accessible litter box, using the suggestions above. It's not necessary to take your cat to the litter box and move her paws back and forth in the litter; in fact, we don't recommend it, as such an unpleasant experience is likely to initiate a negative association with the litter box.

If Problems Develop

If your cat begins to eliminate in areas other than the litter box, your first call should always be to your veterinarian. Many medical conditions can cause a change in a cat's litter box habits. If your veterinarian determines that your cat is healthy, the cause may be a simple behavior problem that can be resolved by using behavior modification techniques. Punishment is not the answer, nor is banishing your cat outdoors. For long-standing or complex situations, contact an animal-behavior specialist who has experience working with cats.

BEHAVIOR
SERIES

Solving Litter Box Problems

IF YOU'RE HAVING A HARD TIME persuading your cat to head for the litter box when it's appropriate, it may be time to draw a line in the sand. Most cats prefer eliminating on a loose, grainy substance, which is why they quickly learn to use a litter box. But when their preferences include the laundry basket, the bed, or the Persian rug, you may find yourself with a difficult problem. By taking a closer look at your cat's environment, you should be able to identify factors that have contributed to the litter box problem and make changes that encourage your cat to head for the litter box once again.

A common reason why cats don't use the litter box is an aversion to the box, such as dislike of a covered box or dissatisfaction with the depth of the litter. Two other common reasons your cat may avoid the litter box are a preference for a particular type of litter not provided in the box or a preference for a particular location where there is no box.

Sometimes the problem is a combination of all three factors. To get to the answer, you'll need to do a little detective work—and remember, the original source of the problem may not be the reason it's continuing. For example, your cat may have stopped using the litter box because of a urinary tract infection, and then developed a surface preference for carpet and a location preference for the bedroom closet. If that's the case, you'll need to address all three of these factors to resolve the problem.

Cats don't stop using their litter boxes because they're upset at their human caregivers and determined to get revenge for something that offended or angered them. Because humans act for these reasons, it's easy for us to assume that our pets do as well. But animals don't act out of spite or revenge, so it won't help to punish your cat or give her special privileges in the hope that she'll start using the litter box again.

Medical Problems

It's common for cats with medical problems to begin eliminating outside of their litter boxes. For example, a urinary tract infection or crystals in the urine can make urination very painful—and both are serious conditions that require medical attention. Cats often associate this pain with the litter box and begin to avoid it. So if your cat has a house-soiling problem, check with your veterinarian first to rule

out any medical problems as a cause of the behavior. Cats don't always act sick even when they are, and only a trip to the veterinarian for a thorough physical examination can rule out a medical problem.

Cleaning Soiled Areas

Because animals are highly motivated to continue soiling an area that smells like urine or feces—and because cats' sense of smell is so much stronger than humans'—it's important to thoroughly and properly clean the soiled areas.

Aversion to the Litter Box

Your cat may have decided that the litter box is an unpleasant place to eliminate if:

- The box is not clean enough for her.
- She has experienced painful urination or defecation in the box due to a medical problem.
- She has been startled by a noise while using the box.
- She has been ambushed while in the box either by another cat, a child, a dog, or by you, if you were attempting to catch her for some reason.
- She associates the box with punishment (for example, someone punished her for eliminating outside the box, then placed her in the box).

What You Can Do

Keep the litter box extremely clean. Scoop at least once a day and change the litter completely every four to five days. If you use scoopable litter, you may not need to change the litter as frequently, depending on the number of cats in the household, the size of the cats, and the number of litter boxes.

continued on reverse side

If you can smell the box, then you can be pretty sure it's offensive to your cat as well.

Add a new box in a different location, and use a different type of litter in the new box. Because your cat has decided that her old litter box is unpleasant, you'll want to make the new one different enough that she doesn't simply apply the old, negative associations to the new box.

Make sure that the litter box isn't near an appliance (such as a furnace) that makes noise, or in an area of the home that your cat doesn't frequent.

If ambushing is a problem, create more than one exit from the litter box, so that if the "ambusher" is waiting by one area, your cat always has an escape route.

If you have multiple cats, provide one litter box for each cat, plus one extra box in a different location.

Surface Preferences

All animals develop preferences for a particular surface on which they like to eliminate. These preferences may be established early in life, but they may also change overnight for reasons that we don't always understand. Your cat may have a surface preference if:

- She consistently eliminates on a particular texture—for example, soft-textured surfaces such as carpeting, bedding, or clothing, or slick-textured surfaces such as tile, cement, bathtubs, or sinks.
- She frequently scratches on this same texture after elimination, even if she eliminates in the litter box.
- She is or was previously an outdoor cat and prefers to eliminate on grass or soil.

What You Can Do

If you recently changed the type or brand of your cat's litter, go back to providing the litter that your cat had been using. If your cat is eliminating on soft surfaces, try using a high-quality scoopable litter.

If your cat is eliminating on slick, smooth surfaces, try putting a very thin layer of litter at one end of the box, leaving the other end bare, and put the box on a hard floor.

If your cat has a history of being outdoors, add some soil or sod to the litter box.

To discourage your cat from using a certain area, cover the area with an upside-down carpet runner or aluminum foil, or place citrus-scented cotton balls over the area.

- Reducing Urine-Marking Behavior in Dogs and Cats

This information provided for you by

Location Preferences

Your cat may have a location preference if:

- She always eliminates in quiet, protected places, such as under a desk, beneath a staircase, or in a closet.
- She eliminates in an area where the litter box was previously kept or where there are urine odors.
- She eliminates on a different level of the home from where the litter box is located.

What You Can Do

Put at least one litter box on every level of your home. (Remember, a properly cleaned litter box does not smell.)

To make the area where she has been eliminating less appealing to your cat, cover the area with an upside-down carpet runner or aluminum foil, place citrus-scented cotton balls over the area, or place water bowls in the area (because cats often don't like to eliminate near where they eat or drink) or put a litter box in the location where your cat has been eliminating. When she has consistently used this box for at least one month, you may gradually move it to a more convenient location at the rate of an inch—seriously!—per day.

Everyone Makes Mistakes

If you catch your cat in the act of eliminating outside the litter box, do something to interrupt her like making a startling noise, but be careful not to scare her. Immediately take her to the litter box and set her on the floor nearby. If she wanders over to the litter box, wait and praise her after she eliminates in the box.

If she takes off in another direction, she may want privacy, so watch from afar until she goes back to the litter box and eliminates, then praise her when she does.

Don't ever punish your cat for eliminating outside of the litter box. By the time you find the soiled area, it's too late to administer a correction. Do nothing but clean it up. Rubbing your cat's nose in it, taking her to the spot and scolding her, or inflicting any other type of punishment will only make her afraid of you or afraid to eliminate in your presence. Animals don't understand punishment after the fact, even if it's only seconds later, and trying to punish them will often make matters worse.

Other Types of House Soiling Problems

Marking/Spraying: To determine if your cat is marking or spraying, consult a veterinarian or animal behaviorist.

Fears or Phobias: When animals become frightened, they may lose control of their bladders or bowels. If your cat is afraid of loud noises, strangers, or other animals, she may soil the home when she is exposed to these stimuli.

Positive Reinforcement

Training Your Cat

WE ALL LIKE TO BE PRAISED rather than punished. The same is true for your cat, and that's the theory behind positive reinforcement. Positive reinforcement means giving your pet something pleasant or rewarding immediately after she does something you want her to do. Because your praise or reward makes her more likely to repeat that behavior in the future, it is one of your most powerful tools for shaping or changing your cat's behavior. It's more effective to teach your pet what she should do than try to teach her what she shouldn't.

Correct timing is essential when using positive reinforcement. The reward must occur immediately—within seconds—or your cat may not associate it with the proper action. For example, when your cat uses her scratching post, you can throw a piece of dry cat food for her to chase as a reward. Many cats enjoy chasing (hunting) their food and it's good exercise too. But if you throw the food when she has stopped scratching the post and is walking toward you, she will think she's being rewarded for coming to you.

Consistency is also an important element in training. Everyone in the family should reward the same desired behaviors.

Using Positive Reinforcement

Positive reinforcement may include food treats, praise, petting, or a favorite toy or game. When your pet is first learning a new behavior, such as clawing the scratching post instead of your couch, she should be rewarded every time you catch her using her scratching post. You may even help shape her behavior of using the scratching post by spraying it with catnip (if she reacts positively to catnip) or enticing her with a toy that you dangle on the post. Taking your cat over to the scratching post,

positioning her paws on the post, and raking them along the post to show her what she's supposed to do will likely have the opposite effect of encouraging her to use the post. She may interpret your actions as frightening and uncomfortable. It's important to look at the world from her point of view.

Once your cat reliably offers the desired behavior, you may reward her with treats intermittently, for example, three out of every four times she does the behavior. Then, over time, reward her about half the time, then about a third of the time, and so on, until you're only rewarding her occasionally with a treat. Continue to praise her every time. Your cat will learn that if she keeps offering desired behaviors, eventually she'll get what she wants—your praise and an occasional treat. You won't be forever bound to carry a pocketful of goodies, but it's fun to surprise your cat from time to time.

The Pros and Cons of Punishment

Punishment can be verbal, postural, or physical and is meant to make your pet immediately associate something unpleasant when she does something you don't want her

continued on reverse side

to do. The punishment makes it less likely that the behavior will occur again. To be effective, punishment must be delivered while your pet is engaged in the undesirable behavior—in other words, “caught in the act.” If the punishment is delivered too late, even seconds later, your pet will not associate the punishment with the undesired behavior. The punishment will seem unpredictable to her.

Remember, cats do not act out of spite or revenge, and they don't have a moral sense of right and wrong. Never use physical punishment that involves discomfort or pain as this may cause her to bite, defend herself, or resort to other undesirable behaviors. Holding your cat's neck skin and shaking her may result in a frightened cat who scratches or bites to defend herself. And punishment might be associated with other stimuli, including people, that are present at the time the punishment occurs. For example, a cat who is punished for getting too close to a new baby may become fearful of, or aggressive toward, that baby—or toward other babies. That's why physical punishment is not only bad for your cat, it's also bad for you and others.

Punishment delivered by you may erode your cat's trust and frighten her. That's why punishment is most effective when it does not come directly from you. For example, if your cat enjoys scratching the couch, you may apply special double-sided tape to those surfaces. Cats rarely like sticky paws. Your cat will perceive the couch, instead of you, as delivering the punishment. In this way, too, your cat is more likely to avoid the undesirable behavior when you're not around. However, it is critical that while discouraging undesirable behaviors, you help your cat understand what you want her to do and provide appropriate outlets for her normal cat behaviors.

One of the reasons that cats are such fun companions is that when they're not sleeping, many of them enjoy playing. Playing helps your cat develop physically and behaviorally. Providing appropriate play outlets for your cat can reduce undesirable behaviors. Be sure your cat has safe toys to play with by herself, and don't underestimate the power of playing with your cat to strengthen the bond between you and enhance the quality of life for both of you.

BEHAVIOR
SERIES

Cats: Destructive Scratching

Although some people think a cat's scratching behavior is a reflection of her distaste for a couch's upholstery, a not-so-subtle hint to open the drapes, or a poorly conceived Zorro impersonation, the fact is that cats scratch objects in their environment for many perfectly normal reasons.

Why Do Cats Scratch?

Cats scratch for many reasons, including:

- To remove the dead outer layer of their claws.
- To mark their territory by leaving both a visual mark and a scent—they have scent glands on their paws.
- To stretch their bodies and flex their feet and claws.
- To work off energy.

Because scratching is a normal behavior and one that cats are highly motivated to display, it's unrealistic to try to prevent them from scratching. Instead, the goal in resolving scratching problems is to redirect the scratching onto acceptable objects.

Training Your Cat to Scratch Acceptable Objects

You must provide objects for scratching that are appealing, attractive, and convenient from your cat's point of view. Start by observing the physical features of the objects your cat is scratching. The answers to the following questions will help you understand your cat's scratching preferences:

- Where are they located? Prominent objects, objects close to sleeping areas, and objects near the entrance to a room are often chosen.

- What texture do they have—are they soft or coarse?
- What shape do they have—are they horizontal or vertical?
- How tall are they? At what height does your cat scratch?

Now, considering your cat's demonstrated preferences, substitute similar objects for her to scratch (rope-wrapped posts, corrugated cardboard, or even a log). Place the acceptable object(s) near the inappropriate object(s) that she's already using. Make sure the objects are stable and won't fall over or move around when she uses them.

Cover the inappropriate objects with something your cat will find unappealing, such as double-sided sticky tape, aluminum foil, sheets of sandpaper, or a plastic carpet runner with the pointy side up. Or you may give the objects an aversive odor by attaching cotton balls containing perfume, a muscle rub, or other safe yet unpleasant substances. Be careful with odors, though, because you don't want the nearby acceptable objects to also smell unpleasant.

When your cat is consistently using the appropriate object, it can be moved very gradually (no more than three inches each day) to a location more suitable to you. It's best, however, to keep the appropriate scratching objects as close to your cat's preferred scratching locations as possible.

continued on reverse side

Don't remove the unappealing coverings or odors from the inappropriate objects until your cat is consistently using the appropriate objects in their permanent locations for several weeks, or even a month. They should then be removed gradually, not all at once.

Should I Punish My Cat for Scratching?

NO! Punishment is effective only if you catch your cat in the act of scratching unacceptable objects and have provided her with acceptable scratching objects. Punishment after the fact won't change the behavior, may cause her to be afraid of you or the environment, and may elicit defensive aggression. Used by itself, punishment won't resolve scratching problems because it doesn't teach your cat where to scratch instead. If you do catch your cat in the act of scratching inappropriate objects, punish her in a way that prevents her from associating the punishment with you. Try making a loud noise (using a whistle, shaking a soda can filled with rocks, or slapping the wall) or using a water-filled squirt bottle. If you use other, more interactive techniques, she'll learn to refrain from scratching in your presence but will continue to scratch when you're not around.

How Do I Trim My Cat's Claws?

To help keep them sharp, cats keep their claws retracted until they're needed. As the claws grow too long and become curved, they can't be retracted completely. You should clip off the sharp tips of your cat's claws on her front feet every two weeks or so. Clipping your cat's claws will also help prevent them from becoming snagged in carpets and fabrics, not to mention your skin!

Before trimming your cat's claws, help her get accustomed to having her paws handled and squeezed. You can do this by gently petting her legs and paws while giving her a treat. This will help to make it a more pleasant experience. Gradually increase the pressure so that petting becomes gentle squeezing, as you'll need to do this to extend the claw. Continue with the treats until your cat tolerates this kind of touching and restraint. It may take a little longer if she's not used to having her legs or paws handled.

Apply a small amount of pressure to her paw—with your thumb on top of her paw and your index finger underneath—until a claw is extended. You should be able to see the pink or "quick," which is a small blood vessel. Don't cut into this pink portion, as it will bleed and be painful for your cat. If you cut off just the sharp tip of the claw, the "hook," it will dull the claw and prevent extensive damage to household objects and to your skin.

There are several types of claw trimmers designed especially for pets. These are better than your own nail clipper because they won't crush the claw. Until you and your cat have become accustomed to the routine, one claw or foot a day is enough of a challenge. Don't push to do all of them at once, or you'll both have only negative memories of claw clippers!

Should I Declaw My Cat?

Declawing is a procedure whereby a veterinarian amputates the end digit and claw of a cat's paws—similar in scope to cutting off a person's finger at the last joint. The Humane Society of the United States opposes declawing when done solely for the convenience of the owner. Scratching is a natural behavior for cats and can be directed to appropriate items. Declawing can also lead to litter box or aggression problems. However, if you feel that you must either declaw your cat or give her up, we would rather see your cat stay in her home and be your lifelong companion. If you do decide to have your cat declawed, we suggest that you have the surgery done at the same time she's spayed (or neutered, if your cat is a male). Never have rear paws declawed, and be sure to always keep your cat indoors; without claws to defend herself or climb to escape, your cat is in much greater danger outdoors—and the great outdoors is a very unsafe place for cats to begin with.

BEHAVIOR
SERIES

Cat Toys and How to Use Them

ALTHOUGH CATS generally have different play styles than their canine counterparts, toys are as much a necessity for cats as they are for dogs. Toys help fight boredom and give cats an outlet for their instinctive prey-chasing behaviors. And when you are the one moving the toy around while your cat fishes for it, chases after it, or jumps in pursuit of it, playtime becomes a bonding experience for you and your cat.

"Safe" Toys

Our mothers always told us "no playing ball in the house," but cats can usually participate in that forbidden exercise without knocking down a vase or a lamp (and being grounded for two weeks). Still, there are plenty of factors that may contribute to the safety of the toy they're batting around.

Many of those factors are completely dependent upon your cat's size, activity level, and preferences. Another factor to be considered is the environment in which your cat spends her time. Although we can't guarantee your cat's enthusiasm or her safety with any specific toy, we can offer the following guidelines.

Be Cautious

The things that are usually the most attractive to cats are often the very things that are the most dangerous. Cat-proof your home by removing string, ribbon, yarn, rubber bands, plastic milk jug rings, paper clips, pins, needles, dental floss, and anything else that could be ingested. All of these items are dangerous, no matter how cute your cat may appear when she's playing with them.

Avoid or alter any toys that aren't "cat proof" by removing ribbons, feathers, strings, eyes, or other small parts that could be chewed and ingested.

Soft toys should be machine washable. Look for stuffed toys that are labeled as safe for children under three years of age and that don't contain any dangerous fillings. Problem fillings include things like nutshells and polystyrene beads. Remember that rigid toys are not as attractive to cats.

Recommended Toys

Active Toys

- Round plastic shower curtain rings, which are fun either as a single ring to bat around, hide, or carry, or when linked together and hung in an enticing spot.
- Plastic balls, with or without bells inside.
- Ping-Pong balls and plastic practice golf balls with holes to help cats carry them. Try putting one in a dry bathtub, as the captive ball is much more fun than one that escapes under the sofa. You'll probably want to remove the balls from the bathtub before bedtime, or you may lose some sleep, as two o'clock in the morning seems to be a prime time for this game.

continued on reverse side

- Paper bags with any handles removed. Paper bags are good for pouncing, hiding, and interactive play. Plastic bags are not a good idea, as many cats like to chew and ingest the plastic.
- Sisal-wrapped toys, which are very attractive to cats who tend to ignore soft toys.
- Empty cardboard tubes from toilet paper and paper towels, made even more fun if you “unwind” a little cardboard to get them started.

Comfort Toys

- Soft stuffed animals, which are good for several purposes. For some cats, the stuffed animal should be small enough to carry around. For cats who want to wrestle with the toy, the stuffed animal should be about the same size as the cat. Toys with legs and a tail seem to be especially enticing to cats.
- Cardboard boxes, especially those a little too small for your cat to fit into.

Catnip

- Catnip-filled soft toys, which cats like to kick, carry, and rub. Catnip is not addictive and is perfectly safe for cats to roll in, rub in, or eat.
- Plain catnip can be crushed and sprinkled on the carpet or, for easier cleanup, on a towel placed on the floor. Catnip oils will often stay in the carpet, and although they're not visible to us, your cat will still be able to smell them.
- Catnip sprays rarely have enough power to be attractive to cats.
- Not all cats are affected by catnip. Some cats may become overstimulated to the point of aggressive play and others may become relaxed.
- Kittens under six months old seem to be immune to catnip.

Get the Most out of Toys!

- Rotate your cat's toys weekly by making only a few available at a time. Keep a variety of types easily accessible. If your cat has a favorite, like a soft “baby” that she loves to cuddle with, you may want to leave that one out all the time.
- Provide toys that offer a variety of uses—at least one toy to carry, one to wrestle with, one to roll, and one to “baby.”
- Hide-and-seek is a fun game for cats. “Found” toys are often much more attractive than a toy which is obviously introduced.
- Many of your cat's toys should be interactive. Interactive play is very important for your cat because she needs active “people time”—and such play also enhances the bond between you and your pet. Cats generally engage in three types of play—“fishing, flying, and chasing”—and all types are much more engaging for cats when you are part of them.

Solving Aggression Between Family Cats

IF THE BATTLES between your feline family members are anything like the struggle between Cain and Abel, there are a few things you can do to prevent the “sibling rivalry” from reaching biblical proportions. Of course, it’s almost impossible to guess how well any particular pair or group of cats will ultimately tolerate each other: Some unusually territorial cats may never adjust to sharing their house and may do best in a one-cat family. But many aggression problems between cats can be successfully resolved, even if the two don’t end up best friends when all is said and done. You’ll need to commit time and effort to solve aggression problems between cats—don’t give up without consulting the appropriate experts.

Common Types of Aggressive Behaviors Between Cats

Territorial Aggression

Territorial aggression occurs when a cat feels that his territory has been invaded by an intruder. Cats are very territorial—much more so than dogs—and female cats can be just as territorial as males. The behavior patterns in this type of aggression include chasing and ambushing the intruder, as well as hissing and swatting when contact occurs. Territorial problems often occur when a new cat is brought into a household, when a young kitten reaches maturity, or when a cat sees or encounters neighborhood cats outside. It’s not uncommon for a cat to be territorially aggressive toward one cat in a family yet friendly and tolerant to another.

Inter-Male Aggression

Adult male cats normally tend to threaten and sometimes fight with other males. These behaviors can occur as sexual challenges over a female or to achieve a relatively high position in the cats’ loosely organized social hierarchy. This type of aggression involves much ritualized body posturing, stalking, staring, yowling, and howling. Attacks are usually avoided if one cat “backs down” and

walks away. If an attack occurs, the attacker will usually jump forward, directing a bite to the nape of the neck, while the opponent falls to the ground on his back and attempts to bite and scratch the attacker’s belly with his hind legs. The cats may roll around biting and screaming, suddenly stop, resume posturing, fight again, or walk away. Cats don’t often injure one another this way, but you should always check for puncture wounds, which are prone to infection. Neutered males are much less likely to fight in this way—yet another great reason for having your animal sterilized.

Defensive Aggression

Defensive aggression occurs when a cat is attempting to protect himself from an attack he believes he cannot escape. This can occur in response to punishment or the threat of punishment from a person, an attack or attempted attack from another cat, or any incident that makes the animal feel threatened or afraid. Defensive postures include crouching with the legs pulled in under the body, laying the ears back, tucking the tail, and rolling slightly to the side. These responses are not the same as the submissive postures dogs show because they’re not intended to “turn off” an attack from another cat. Continuing to approach a cat in this posture is likely to precipitate an attack.
